Design for Flooding : Architecture, Landscape, and Urban ...

So solutions must be designed for particular conditions. Landscape architects develop multi-use systems that can serve as public spaces and flooding solutions. Landscape architects can deploy their understanding of topography, hydrology, and ecology to create systems that divert, absorb, or capture water. Landscape architects are well trained to work with planners, ecologists, engineers, architects, and others to plan, design and implement these systems.

Resilient Design: Flooding | asla.org

The site design features a series of landforms shaped to accept seasonal flooding and allow water to flow through the island, with high ground levels situated to accommodate water levels of approximately 120 feet, which represented a 100-year flood at the time of the project's design. Designing to these flood parameters, which were considered accurate at the time, meant that major flooding and ensuing recovery efforts would take place from time to time, but certainly not on an annual or ...
