In political economy and especially Marxian economics, exchange value refers to one of four major attributes of a commodity, i.e., an item or service produced for, and sold on the market. The other three aspects are use value, economic value, and price. Thus, a commodity has: a value; a use value; an

@FredrikWidlund It's the same in both languages. {0} is not a special case for structs nor arrays. The rule is that elements with no initializer get initialized as if they had 0 for an initializer. If there are nested aggregates (e.g. struct x array[100]) then initializers are applied to the non-aggregates in "row-major"
